

*ARTICULATING PUSHER ASSEMBLY*

ABSTRACT

[0036] An articulating pusher assembly, disposed within a nail loading assembly, includes an articulating pusher coupled to an adapter, the articulating pusher for engaging a nail. The adapter may be further coupled with a casing which engages a spool assembly to provide a constant pressure on the articulating pusher assembly to advance the nail down the length of the nail loading assembly. The articulating pusher is enabled to accommodate the use of a variety of nail types and collation angles of nail strips within the nail loading assembly.
